

# ESSENTIALS OF THE MONETARY POLICY

## Federal Reserve (Fed)

### Rake Hikes Coming Soon

By Francis Génèreux, Senior Economist

#### ACCORDING TO THE FED

- ▶ The Committee decided to keep the target range for the federal funds rate at 0.00% to 0.25%.
- ▶ With inflation well above 2% and a strong labor market, the Committee expects it will soon be appropriate to raise the target range for the federal funds rate.
- ▶ The Committee decided to continue to reduce the monthly pace of its net asset purchases, bringing them to an end in early March.
- ▶ Indicators of economic activity and employment have continued to strengthen. The sectors most adversely affected by the pandemic have improved in recent months but are being affected by the recent sharp rise in COVID-19 cases. Job gains have been solid in recent months, and the unemployment rate has declined substantially. Supply and demand imbalances related to the pandemic and the reopening of the economy have continued to contribute to elevated levels of inflation. Overall financial conditions remain accommodative.
- ▶ Risks to the economic outlook remain, including from new variants of the virus.

#### COMMENTS

The Omicron variant's risk to the economy as well as the lack of clear signals during December's meeting pointed to staying the course on rates at today's meeting. However, the Fed still made some major decisions. First, it cleared the way for a rate hike as early as the next meeting on March 16. The Fed's officials also decided to reduce their security purchases once again so that the quantitative policy ends by the time of the March meeting. Lastly, they released the principles framing any future reduction in the size of the Fed's balance sheet.

In its statement, the Fed seems to be satisfied with the progress that the job market has made. Still, it's clearly the inflationary pressure that is causing it to lay the groundwork for the normalization of its monetary policy. The sentence signalling that the right time to raise interest rates is fast approaching also mentions inflation well above the 2% target. The most recent speeches by the Fed's officials also implied that they are keeping their eyes on inflation.

Does an imminent rate hike imply that there will be many? In December, the median forecasts of the Fed's officials assumed three 25 basis-point increases in 2022. During today's press conference, Fed Chair Jerome Powell indicated that no path or timeframe had been set yet for increasing key rates. He said that they will be guided by the evolution of indicators and the economic outlook. That said, the Fed is expected to be less patient than at the beginning of the previous cycle of rate increases in 2015. Overall, it's easy to imagine that the Fed will react to higher inflation above all else. It looks like there will be at least three rate hikes of 25 basis points each in March, June and September. However, if inflation doesn't fall as anticipated, there may be more hikes. Still, it's important to keep in mind that future rate hikes will occur at the same time as the Fed reduces the size of its balance sheet, which is expected to be faster this time than the last.

#### IMPLICATIONS

After nearly two years of rates at their effective lower bound, the first key rate hike should happen in March, followed by at least two more in 2022.

# Schedule 2021 of Central Bank Meetings

Date	Central banks	Decision	Rate
<b>January</b>			
14	Bank of Korea	s.q.	0.50
